INTRODUCTION

PIET HEIN EEK

In 1990, Piet Hein Eek graduated from the Academy for Industrial Design (later Design Academy) in Eindhoven, with a cupboard made of scrapwood; the now famous Classic Cupboard in Scrapwood (the cupboard is in the collection of the Stedelijk Museum Amsterdam). In an age of lavishness and perfection, he opted for simple materials and sober design. Eek then founded Eek & Ruijgrok B.V. with fellow student Nob Ruijgrok in 1992. They worked under the name 'Piet Hein Eek', from their factory in Geldrop, which they later moved to a former Philips factory in Eindhoven.

Eek's principle is to create with what is available. Material, technique and craftsmanship are starting points for his designs. By using what the world has to offer as a starting point instead of putting the idea first, Eek is able to produce his designs for reasonable prices in Eindhoven despite high labour costs.

The respect for materials, technique and craftsmanship did not only lead to the design of the classic scrapwood cabinet. Over the years, a complete collection has emerged based on the same principles. The method of production is part of the design, resulting in designs that make sense from the production perspective but are manufactured quite differently than usual. Instead of being concealed, the construction is often visible. This is not only less work, but often produces an image from which you can see how and why something was made.

Where labour is increasingly being moved to low-wage countries or performed by computer-controlled machines, Eek kept his workshop in Eindhoven, where each product is handmade with outstanding crafts-manship and an eye for detail. The former Philips factory at Strijp-R in Eindhoven of over 11,000 square metres houses his workshop, office, shop, showroom, gallery, meeting rooms, event space, studios, hotel and several restaurants.

WORKSHOP

LED spot 1, 2, 4
in aluminum, brass
and copper

When we moved to our new location, we did not nearly have enough lights to illuminate our new showroom properly. These old halogen lights were also extremely energy-consuming, which was not feasible for such a large space.

Thanks to a miraculous trade, we acquired a huge amount of LED lights, for which we designed an utterly simple reflective mount. The LED spots are available in aluminum, brass and copper and come in 1, 2 or 4 light variations.

One mould lamp
(Eenmal lamp)

The ceramic One mould lamp can be used as multiple different lamps, all created from a single mould. You can set it down as a free-standing nightlight, mount it on the wall as an up or down lighter, mount it on a stand as a table lamp, or mount it on a long stand to use it as a floor lamp or reading lamp.

Small ceramic light
(Klein keramiek lampje)

The design for the small ceramic lamp was extremely simple and obvious, but lead to a wide range of possibilities. You can hang it from the ceiling, mount it on a triangular stand to make a standing lamp, or mount it to the wall. A group of small ceramic lamps can also be hung together to create a chandelier.

Line lamp (Streeplamp)

The line lamp is an elegant and minimalistic
lamp in the shape of a thin stripe. You can hang
it fairly low above a table as a practical and elegant
lighting solution, or you can hang multiple higher
up to create an interesting ambience. The lamp
is available in brass and copper and can be
made in three different lengths.
